Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-11   (canceled).

Claim 12 (currently amended):   An information processing apparatus according to claim ~~1~~ 38, wherein said application program contains a file management program for managing files.

Claim 13 (currently amended):   An information processing apparatus according to claim ~~1~~ 38, wherein said application program contains a position and time information management program for managing ~~user~~-input position information and the time information corresponding to the position information.

Claims 14-23 (canceled).

Claim 24 (currently amended):   An information processing method according to claim ~~14~~ 39, wherein said application program contains a file management program for managing files.

Claim 25 (currently amended):   An information processing method according to claim ~~14~~ 39, wherein said application program contains a position and time information management program for managing ~~user~~-input position information and the time information corresponding to the position information.

Claims 26-28 (canceled).

Claim 29 (currently amended): An information processing apparatus according to claim ~~1~~ 38, wherein said application program is capable of multicasting said time information to said another application program belonging to a particular group.

Claim 30 (currently amended): An information processing apparatus according to claim ~~1~~ 38, wherein said ~~particular~~ application program is an application started by a same user.

Claim 31 (currently amended): An information processing apparatus according to claim ~~1~~ 38, wherein said application program operates on a different computer than said another application program.

Claim 32 (currently amended): An information processing method according to claim ~~14~~ 39, wherein said application program is capable of multicasting said time information to said another application program belonging to a particular group.

Claim 33 (currently amended): An information processing method according to claim ~~14~~ 39, wherein said ~~particular~~ application program is an application started by a same user.

Claim 34 (currently amended): An information processing method according to claim ~~14~~ 39, wherein said application program operates on a different computer than said another application program.

Claims 35-37 (canceled).

Claim 38 (new): An information processing apparatus comprising:

storage means for repeatedly storing application data in a plurality of different stored states when said application is operated, wherein each of said different stored state of said application data comprises time information corresponding to at least one of a day and time at which said data is stored;

an application program for use with said application data;

said application program comprising:

transmit means for transmitting time information to another application program;

receive means for receiving time information from said another application program;

time setting means for setting at least one of desired day and time in said application program;

control means for locating application data from said stored plurality of different sets of said application data at about at least one of said set day and time and for reproducing the state of said application program by using said located application data;

wherein when said at least one of day and time is set by said time setting means,

said transmit means transmits at least one of said set day and time information to another application,

and control means of said another application program locate another application data from said stored plurality of different sets of another application data at time closest to at least one of said received day and time information and reproduce the state of said another application program by using said located another application data.

Claim 39 (new): An information processing method comprising:

repeatedly storing application data in a plurality of different stored states when said application is operated, wherein each of said different stored state of said data comprises time information corresponding to at least one of a day and time at which said data is stored;

transmitting said time information from an application program to another application program;

receiving, in said application program, time information corresponding to at least one of a day and time from said another application program;

setting at least one of a day and time in said application program based on said time information received from said another application program; and

locating another application data by said another application program from said stored plurality of different sets of another application data at a time closest to at least one of said received day and time information and reproduce the state of said another application program by using said located another application data.
